# Use of Digital Technologies and Preferred Modalities for Obtaining Health Information and Advice: Estimates for Adults aged 25-90 from the 2017 Kaiser Permanente Northern California Member Health Survey 

Report prepared by<br>Nancy P. Gordon, ScD, Member Health Survey Director<br>August 6, 2020

This brief report based on data from the 2017 Kaiser Permanente Member Health Survey provides information about the use of digital technologies, digital information technologies, sources of health information used in the prior year, and preferred methods for getting health information and advice.

## What is the KPNC Member Health Survey?

The Member Health Survey is a self-administered (print and online) survey that has been conducted every 3 years since 1993 with stratified random samples of adults who are current members of the Kaiser Permanente Medical Care Program in Northern California and are able to answer an Englishlanguage questionnaire. The primary purposes of the survey are:

- To learn about the health-related needs and interests of the culturally diverse Kaiser Permanente Northern California adult membership, and by extension, members of the communities we serve;
- To provide information for health services planners to make evidence-based decisions about health information and health care service delivery; and
- To support research to improve the health of our members and the communities we serve.

The Member Health Surveys project is funded by Kaiser Permanente's Northern California Community Benefit (CB) Program through a direct allocation to the Division of Research. Reports and statistics based on previous surveys, survey questionnaires, and more information about survey methodology in prior cycles can be found by going to www.memberhealthsurvey.kaiser.org. Note that because of the differences in sample design and final respondent sample weighting, the results of the MHS2017 are not directly comparable to previous survey cycles.

## 2017 Member Health Survey sample

The MHS2017 sample was conducted with an age-sex stratified random sample of White, AfricanAmerican/Black, Latinx, and Asian adults who were identified from a 2016 Demographically Enriched Cohort of Kaiser Adults (DECKA2016) race/ethnicity study cohort ${ }^{1}$ ( $\mathrm{N}=$ approximately 2.5 million members). After eliminating adults whose preferred spoken and written language in the electronic health record was not English (since the survey materials were only created in English) from this cohort, we randomly selected set numbers of men and women in 4 age groups (25-44, 45-64, 65-74, 75-90) for each race/ethnic group for the starting survey sample. Some re-assignment of respondents to race/ethnic groups was done based on self-reported race/ethnicity ascertained from the survey. Table A shows the counts of men and women of White, African-American/Black, Latinx, Asian, and Other race/ethnicity in the four age groups in the final sample, prior to weighting.

Survey respondents were assigned weighting factors derived from the DECKA2016 cohort so that estimates based on weighted survey data would reflect the age-sex-racial/ethnic composition of the adult KPNC membership toward the end of calendar year 2016. All prevalence estimates are based on respondent data weighted to the age-sex-race/ethnic composition of the KPNC adult membership. In this report, estimates are provided for ages 25-44, 45-64, 65-74 yr, and 75-90 yr, overall and by

[^0]sex. More information about the survey methodology can be found in the Appendix following the tables.

Table A. Counts in final MHS2017 respondent sample prior to weighting to the 2016 KPNC membership

|  | White | African- <br> American/Black | Latinx | Asian | Other | Total |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| All |  |  |  |  |  |  |
| $25-44 \mathrm{yr}$ | 465 | 322 | 364 | 317 | 19 | 1487 |
| $45-64 \mathrm{yr}$ | 557 | 348 | 397 | 393 | 27 | 1722 |
| $65-74 \mathrm{yr}$ | 333 | 150 | 151 | 171 | 11 | 816 |
| $75-90 \mathrm{yr}$ | 402 | 159 | 189 | 215 | 14 | 979 |
| Men |  |  |  |  |  |  |
| $25-44 \mathrm{yr}$ | 226 | 153 | 177 | 157 | 7 | 720 |
| $45-64 \mathrm{yr}$ | 277 | 157 | 199 | 206 | 10 | 849 |
| $65-74 \mathrm{yr}$ | 162 | 61 | 72 | 85 | 7 | 387 |
| $75-90 \mathrm{yr}$ | 193 | 79 | 94 | 112 | 8 | 486 |
| Women |  |  |  |  |  |  |
| $25-44 \mathrm{yr}$ | 239 | 169 | 187 | 160 | 12 | 767 |
| $45-64 \mathrm{yr}$ | 280 | 191 | 198 | 187 | 17 | 873 |
| $65-74 \mathrm{yr}$ | 171 | 89 | 79 | 86 | 4 | 429 |
| $75-90 \mathrm{yr}$ | 209 | 80 | 95 | 103 | 6 | 493 |

Table B. Distribution of level of education in the four age groups based on weighted 2017 Member Health Survey data

|  | < High School <br> Graduate | High School <br> Graduate/GED | Some College <br> or AA Degree | College <br> Graduate |
| :--- | :---: | :---: | :---: | :---: |
| All |  |  |  |  |
| $25-44 \mathrm{yr}$ | $1.2 \%$ | $11.5 \%$ | $26.0 \%$ | $61.4 \%$ |
| $45-64 \mathrm{yr}$ | $1.8 \%$ | $14.5 \%$ | $34.3 \%$ | $49.4 \%$ |
| $65-74 \mathrm{yr}$ | $2.6 \%$ | $17.0 \%$ | $32.6 \%$ | $47.8 \%$ |
| $75-90 \mathrm{yr}$ | $7.8 \%$ | $25.4 \%$ | $30.5 \%$ | $36.3 \%$ |
| Men |  |  |  |  |
| $25-44 \mathrm{yr}$ | $1.9 \%$ | $14.0 \%$ | $24.2 \%$ | $60.0 \%$ |
| $45-64 \mathrm{yr}$ | $1.9 \%$ | $15.9 \%$ | $30.2 \%$ | $52.0 \%$ |
| $65-74 \mathrm{yr}$ | $3.6 \%$ | $12.0 \%$ | $30.7 \%$ | $53.6 \%$ |
| $75-90 \mathrm{yr}$ | $7.5 \%$ | $21.4 \%$ | $25.7 \%$ | $45.4 \%$ |
| Women |  |  |  |  |
| $25-44 \mathrm{yr}$ | $0.5 \%$ | $9.4 \%$ | $27.5 \%$ | $62.5 \%$ |
| $45-64 \mathrm{yr}$ | $1.7 \%$ | $13.3 \%$ | $38.0 \%$ | $47.0 \%$ |
| $65-74 \mathrm{yr}$ | $1.7 \%$ | $21.1 \%$ | $34.1 \%$ | $43.1 \%$ |
| $75-90 \mathrm{yr}$ | $8.0 \%$ | $28.8 \%$ | $34.5 \%$ | $28.7 \%$ |

Statistics provided in this brief report (in order):

- Table 1: Access to digital technologies (computer, cell phone, mobile phone, wi-fi enabled tablet, home printer); use of digital information technologies (internet, email, text messaging, apps); willingness to complete an online questionnaire on kp.org
- Table 2: Sources of health information used in the prior year
- Table 3: Preferred methods for getting health information and advice

Table 1. Use of Digital Technologies, KPNC Members Ages 25-90 yr, 2017

|  | 25-44 yr |  |  | 45-64 yr |  |  | 65-74 yr |  |  | 75-90 yr |  |  |

Estimated from the 2017 Kaiser Permanente Northern California Member Health Survey, based on responses to the question: "In which of these ways would you prefer to get information and advice about how to manage health conditions and make changes in health behaviors (diet, exercise, etc.)? (Mark ALL that apply)".

* Some people may not have been interested in any health education modalities, but others may not have answered this question which came near the end of the lengthy survey. For this reason, estimates were restricted to people who indicated interest in at least one modality in the checklist.

## Appendix. 2017 Member Health Survey Methodology and Response Rates

In the 2017 survey cycle, we mailed questionnaires and emailed links to the online version of the questionnaire to a stratified random sample of approximately 22,000 adult Health Plan members ages $25-90$ in the KPNC region. Because the 2017 survey sample was only going to be half as large as was used for previous cycles due to budgetary constraints, we employed a different sampling strategy than was used for previous survey cycles that we hoped would yield adequate numbers of White, Black, Latinx, and Asian men and women in three age groups (25-44, 45-64, 65-90) to enable comparisons of characteristics by race/ethnicity. This was done with the knowledge that the survey response rate would be lower due to oversampling of demographic subgroups (i.e., younger adults, Blacks, and Latinx adults) that traditionally are less likely to participate in surveys like this. The survey sample was restricted to members whose electronic health records (EHR) indicated English as a preferred written and spoken language because in the prior attempts to survey Spanish speakers we had extremely low participation rates and we could not afford to translate, print, and mail survey materials in multiple languages. Members were sent print survey materials and companion email links up to two times to try to boost the response rate. Survey participants were told that they would automatically be enrolled in a drawing for one of $100 \times \$ 100$ gift cards.

As expected, the overall response rate (23\%) was considerably lower than was achieved in the 2014/2015 survey cycle, varying by race/ethnicity and sex, and increasing with age. However, the response rates by race/ethnicity $x$ age group $x$ sex were in line with what we had expected based on response rates for these demographic groups in the 2014/2015 survey cycle. Survey respondents were assigned post-stratification weights based on the age ( 5 -year intervals) distributions for men and women in their race/ethnic group derived from a 2016 Demographically Enriched Cohort of Kaiser Adults (DECKA2016) that had been created for another study. ${ }^{1}$ Analyses based on the final weighted respondent sample thus approximately reflects the age x sex x race/ethnic composition in 2016 of KPNC members aged 25-90 whose primary language was English. Because of differences in the method used to select the sample (sampling from 4 race/ethnic groups at the regional level vs. from 19 medical center service populations) and to create the survey weighting factors (based on age-sex composition of each race/ethnic group vs. age-sex composition of each medical center service population), the 2017 survey results are not directly comparable with those from other survey cycles.

MHS2017 response rates by age group, race/ethnicity and sex, ages 25-90

|  | White | African- <br> American/Black | Latinx | Asian | All |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Men |  |  |  |  |  |
| $\mathbf{2 5 - 4 4} \mathbf{~ y r}$ | 12.8 | 7.4 | 7.4 | 13.5 | 9.7 |
| $\mathbf{4 5 - 6 4} \mathbf{~ y r}$ | 26,5 | 15.7 | 19.9 | 23.3 | 21.4 |
| $\mathbf{6 5 - 9 0} \mathbf{~ y r}$ | 59.5 | 34.1 | 44.8 | 50.1 | 48.5 |
| Women |  |  |  |  |  |
| $\mathbf{2 5 - 4 4} \mathbf{~ y r}$ | 23.5 | 16.5 | 17.2 | 21.2 | 19.5 |
| $\mathbf{4 5 - 6 4} \mathbf{~ y r}$ | 37.0 | 28.0 | 28.7 | 30.5 | 31.3 |
| $\mathbf{6 5 - 9 0} \mathbf{~ y r}$ | 64.0 | 41.6 | 44.2 | 50.0 | 51.4 |
| All 25-90 yr | 30.2 | 17.1 | 18.7 | 26.1 | 22.8 |
